Subject: PSC Docket #2005-385-E

Ms. Boyd,

Net metering is important for South Carolina. Many other states allow net metering, but we do not. Net metering is one of the pieces needed in order for SC to utilize the solar energy that shines down on us free of charge from the sun. It would help even out peak usage and would diversify our energy grid, all to the advantage of the citizens of SC. It has come to my attention that the September 12th public hearing on net metering has been postponed to the beginning of the year.

While I think that your advisory committee's recommendations will be important, public input is also important and would allow solar energy to move forward at a faster rate. This would be very good for the environment as whole, and for SC consumers in particular. Please keep solar energy moving forward in our state.

Thank you for your attention,

MaryRose Randall
